

Functional screening tests in cervical dystonia

Do you have cervical dystonia and can walk without assistance?

The Physiotherapists at Westmead Hospital are conducting a study into walking and balance in people with cervical dystonia. We are looking for adults with cervical dystonia who can walk unassisted to attend 1 – 2 sessions with a physiotherapist at Westmead Hospital. During these sessions, participants will be asked to perform a series of walking and balance tests, and fill in some questionnaires. Results from this study will be used to help design new physiotherapy treatments for people with cervical dystonia. This research project has been approved by the Western Sydney Local Health District Human Research Ethics Committee.

If you would like more information or are interested in joining the study please contact Melani Boyce on melani.boyce@health.nsw.gov.au or phone 0407 987 386.
